

# Salus mattress storage

Hospital mattresses are typically stored horizontally, stacked directly on the floor. This method creates challenges for staff when moving or lifting these bulky items, and leads to a build-up of dust on the top mattress, posing hygiene concerns. Additionally, horizontal stacking consumes a significant amount of floor space, reducing overall storage efficiency

With our dedicated Salus mattress storage racks, mattresses are stored vertically, allowing easy and convenient access for the caregiver and completely avoiding mattress compression. Space is optimised and dust accumulation is minimised.

Up to 3 mattresses can be installed within each bay with the rack. Multiple bays and units are designed next to each other to maximise space. Each bay holds up to 250kg.

Mattress carts can easily transport mattresses to patient rooms or storage, then placed in the racks or kept on the cart for future use.

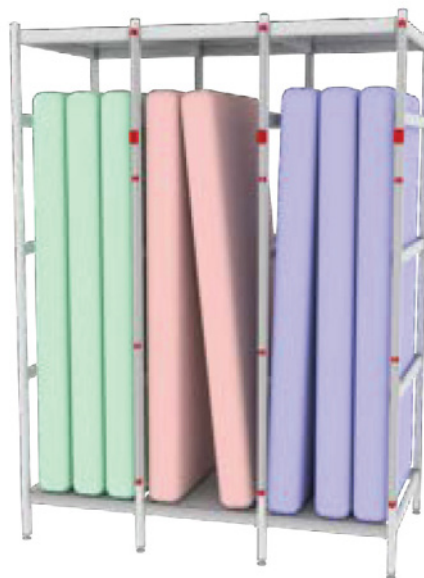

High quality and durable, made in Italy.

National Surgical Corporation
